Re: Intern Opportunities – Cover Letter

Dear Hiring Manager,

Creativity rarely fits the mold, fails a lot before success, requires curiosity, imagination, uniqueness, intelligence, motivation, persistence, teamwork, diligence, and accountability to record and act on unexpected moments of insight and genius. Thomas Edison proved that persistence is a key factor to success with 1,000 failed attempts before he created the first light bulb. What do I have in common with Thomas Edison, Alan Alda, Bill Gates, Guido van Rossum (Python), and Bill and Bob Meistrell (Inventor of Body Glove wet suit)? [Read my Introduction/Bio](#) written for Thomas Edison State University. A one-page interesting, good read (<https://github.com/JohnMeistrell/MA/wiki>).

As I am enrolled at Thomas State University for bachelor's degree in data science, PLA, with 4.0 GPA with target graduation 2024, my original goal of 2023 was delayed after hospitalization in December 2022 for COVID-19 followed by lengthy recovery. Fortunately, I am back to full health and eagerly pursuing my passion for data science, statistics, and new career using the creativity success factors, my Clinical Medical Assistant and computer technical experience with my high IQ and on the right team to achieve my goal to improve people's health and lives.

Having an IQ of 127 for concepts and cognitive ability, professionally determined in 2022 using the Wechsler Adult Intelligence Scale- Fourth Edition (WAIS – IV), combined with my experience and uniqueness is an asset to all. I learn in reverse to understand the whys before the technical how's.

We share common core values, curiosity, passion, accountability, and inspiration, and exploration with an embrace of technology to create solutions and solve problems to make many lives better. I am excited by the opportunity to be a SAS intern and part of the SAS family. In addition, I have registered for the 2023 SAS Hackathon.

Sincerely,

John Meistrell
